Why is this Sub-Fund in this Category?

The Sub-Fund is rated in this category mainly because of the volatility of its precious metals investments.

Are there any other Particular Risks?

Risks that could affect fund performance and are not necessarily fully reflected in the risk and reward rating include:

- Target funds : The investment in target funds implies that the Sub-Fund

is exposed to (i) the investment risks borne by the target funds, (ii) the risks of increase in the level of charges borne by the target funds and (iii) the risk that the target fund limit or suspend the right for their investors to redeem.

- Counterparty risks: The Sub-Fund can conclude various transactions with contractual partners. If a contractual partner becomes insolvent, it can no longer or can only partly settle unpaid debts owed to the Sub-Fund.

- Risks from the use of derivatives: The Sub-Fund may use financial derivatives instruments which may result in the Sub-Fund being leveraged and may result in material fluctuations in the value of the Sub-Fund. Leverage on certain types of transactions including derivatives may impair the Sub-Fund's liquidity, cause it to liquidate positions at unfavorable times or otherwise cause the Sub-Fund not to achieve its intended objective.

Leverage occurs when the economic exposure created by the use of derivatives is greater than the amount invested resulting in the Sub-Fund being exposed to a greater loss than the initial investment.

- Operational risks: The Sub-Fund may fall victim for fraud or criminal acts. It may suffer losses as a result of misunderstandings or mistakes by employees of the AIFM or by external third parties or may be damaged by external events, such as natural disasters.
